

Environmentally Conscious

Long-term supply contracts secure our production. For instance, the supply of old freezers is enough to sustain us for approximately two years. Next in line are towel holders. And when it comes to gray or black pens, we repurpose computer cases, monitor casings, or automotive parts.

The electricity for our production is 100% hydroelectric. The short distances from manufacturing in Switzerland to the end customer ensure an excellent ecological footprint.

High-Quality Recycling

From discarded freezers, we create white granules. This process is known as high-quality recycling, or post-consumer recycling.

We exclusively use plastics that possess the exact same valuable properties we need: impact resistance, abrasion resistance, and UV resistance- all characteristics that make our products durable and of high quality.

Fact Check

High-quality recycling in conjunction with long-lasting products is the most environmentally friendly approach!

Elan 100% recycelt

High-Quality Recycling - the Path to True Sustainability

From discarded freezers, we craft white pens. This is high-quality recycling, also known as "one-to-one" or "post-consumer" recycling.

We exclusively use plastics that possess the same high-quality properties we need: impact resistance, abrasion resistance, and UV resistance – characteristics that make our products durable and of high quality.

Long-term supply contracts secure our production. For instance, the supply of old freezers is enough to sustain us for approximately two years. Next in line are towel holders. And when it comes to gray or black pens, we repurpose computer cases, monitor casings, or automotive parts.
